Innovation spur science based trade and industrial development in a fast changing pace of globalization. Knowledge accumulation and diffusion have been increasingly recognized as fundamental factors that play an important role in long-run economic growth. This paper focuses on the long-term innovation strategy of industrial and technological development in India. This paper examines the relationship and ways in which science and technology (S&T) support industrial development in India. The Indian science and technology space has been instrumental in bringing social and economic changes. The country has not only embraced to upgrade traditional skills to make them relevant and competitive, but has also been on a path to develop advanced technologies, which has eventually played a pivotal role in transforming the nation into a modern, industrialized society. Scientific knowledge and expertise, innovative, high technology, industrial infrastructure and skilled workforce are the key factors that have driven the progress of the country to a major extent. The paper explores four S&T policy areas: education and human resource development, the private sector, the public sector and information-communication technologies. The main argument of this paper is that technology is an increasingly important element of globalisation and of competitiveness and that the acceleration in the rate of technological change and the penetration necessary to participate effectively in globalisation are making it more difficult for many developing countries to compete.

**Keywords:** Innovation, Science, Technology, Industrial Development, and Globalisation

#### Introduction

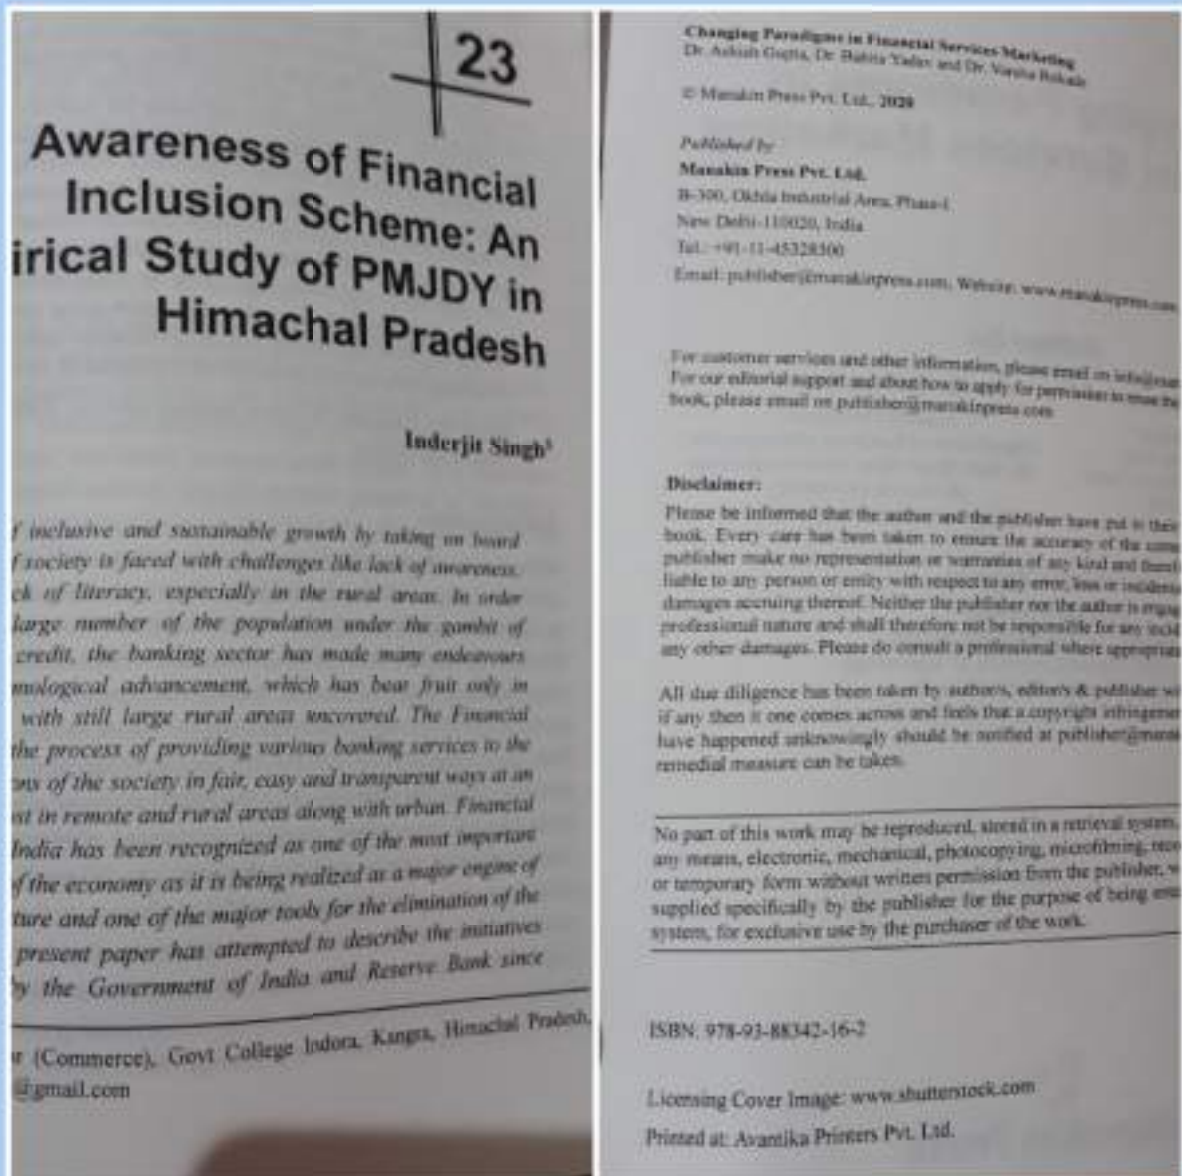

In the pre-economic reform era, the question of scientific and technological development in India had a central role in the general debate on the country's development strategy, whether in policy-oriented discussions, in academic considerations or in discussions in the public and political arena. Unusually, compared to several other contentious issues, science and technology was the subject of a rather broad consensus that, having a few notable exceptions, drew support from across the political spectrum and

## E-Agriculture in India: Introduction and Figuration

Dr. Indrajit Singh\*

### Abstract

E-commerce is the emerging sector for all industries such as apparels, e-books, fasteners, sports and fitness products, etc. While every other business in the country is enjoying the benefits of e-commerce, agriculture is still far behind. But if we get into some facts of agriculture industry, collaborating it with technology will definitely benefit this sector. In India, Agriculture is considered to be a primary occupation for a vast segment of population. We aim to focus on key factors discovered for effective utilization of Information Communication Technology for agricultural boost up, at least on the surface, with supportive of evidence based. E-Agriculture is a rising field focusing on the improvement of rural and agricultural development through advanced information and communication processes. E-agriculture is a relatively recent term in the field of agriculture and rural development practices. E-agriculture, therefore, describes an emerging field focused on the enhancement of agricultural and rural development through approved information and communication processes. More specifically, e-agriculture involves the conceptualization, design, development, evaluation and application of innovative ways to use information and communication technologies (ICTs) in the rural domain, with a primary focus on agriculture. The main aim of this paper is to reach farmers for their awareness, usage and perception to e-Agriculture. E-Agriculture is a platform for supporting marketing of agricultural products.

**Keywords:** E-agriculture, E-commerce, Communication, and Technology.

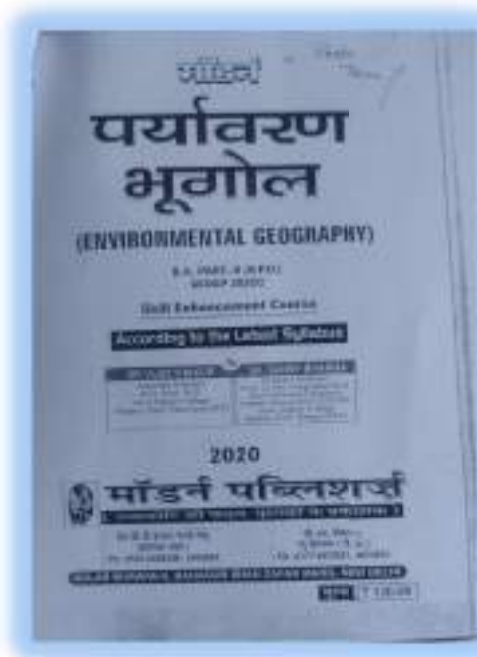

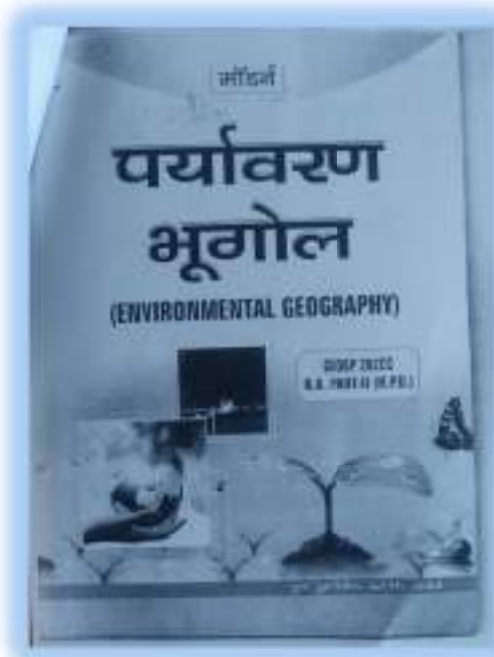

### Introduction

Today all business is going online in India and earning a good amount of revenue. Even the consumers are switching from physical shopping to e-shopping, as they are getting their ordered items, whether clothes, jewels, household items, etc. just

## Impact of Coronavirus (Covid-19) on the Indian Economy: An Overview

-Dr. Indrajit Singh

### Abstract

Globally Coronavirus has produced an unstable environment for people. This has spread all over the world and called as a pandemic by World Health organization. This is stopped many of economic activities due to contagious disease and has no cure till date to fight with corona. It has produced economic impact on globe and India. It may produce recession in many part of the world. In every sector in India most of the products are imported from China, especially in medicine and manufacturing industry. The outbreak of the Covid-19 pandemic is an unprecedented shock to the Indian economy. The economy was already in a parlous state before Covid-19 struck. With the prolonged country-wide lockdown, global economic downturn and associated disruption of demand and supply chains, the

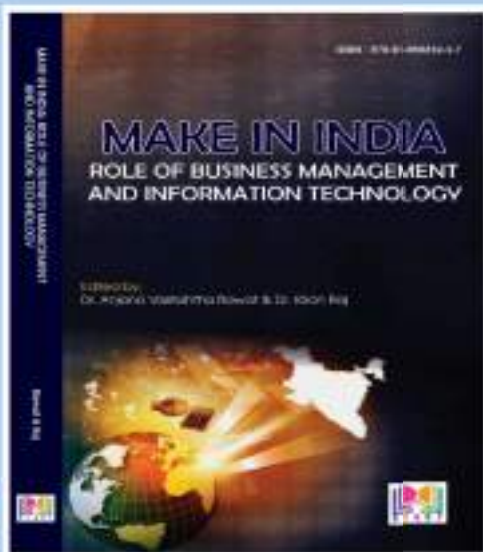

Corona Pandemic (Covid-19) and Interdisciplinary Issues  
 economy is likely to face a protracted period of stagnation. The magnitude of the economic impact will depend upon the duration and severity of the health crisis, the duration of the lockdown and the manner in which the situation unfolds once the lockdown is lifted. In this paper we describe the state of the Indian economy in the pre-Covid-19 period, assess the potential impact of the shock on various segments of the economy, analyse the policies that have been announced so far by the central government and the Reserve Bank of India to ameliorate the economic shock and put forward a set of policy recommendations for specific sectors.

**Keywords:** Covid-19, Pandemic, Economic downturn, and Lockdown.

**Introduction to the Textbook Series**

It is a pleasure to have you as a student of the DINESH series of textbooks. We hope you will find them useful and enjoyable.

**Objectives**

- To provide a clear and concise presentation of the subject.
- To provide a wealth of worked examples and exercises.
- To provide a wealth of self-assessment exercises.

**Key Features**

The DINESH series of textbooks has been written to meet the needs of the students of the various universities and colleges. The series is designed to be user-friendly and to provide a wealth of worked examples and exercises. The series is also designed to be user-friendly and to provide a wealth of worked examples and exercises.

**Worked Examples**

Worked Example 1: A particle starts from rest and moves with a constant acceleration of  $2 \text{ m/s}^2$ . Find the distance travelled in the first 5 seconds.

**Self-Assessment Exercises**

Self-Assessment Exercise 1: A particle starts from rest and moves with a constant acceleration of  $2 \text{ m/s}^2$ . Find the distance travelled in the first 5 seconds.

**Exercises**

Exercise 1: A particle starts from rest and moves with a constant acceleration of  $2 \text{ m/s}^2$ . Find the distance travelled in the first 5 seconds.
